

## Enhanced Care from Home

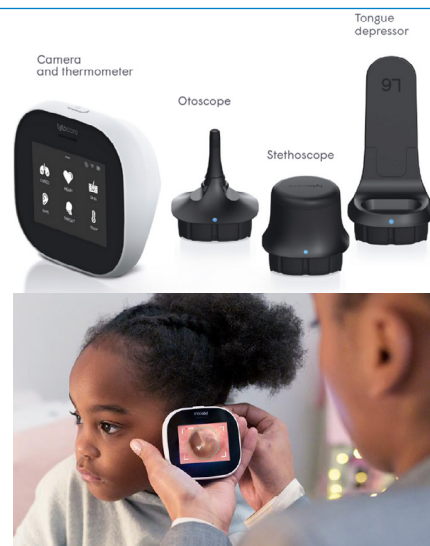

Unlock the capabilities of virtual healthcare with TytoHome™, a Health Canada approved remote medical exam kit. Used in conjunction with Express Care Online, TytoHome gives patients access to more reliable health assessment data to improve the range and reliability of what a traditional virtual visit can diagnose.

### More accurate remote care

Designed for home and travel use, TytoHome is a portable, hand-held examination kit that includes a digital camera, thermometer, stethoscope, otoscope, and tongue depressor. This innovative technology enables patients to have a seamless, high-quality remote physical exam with their clinician conveniently and securely and allows for most common medical problems to be addressed virtually.

### Diagnose and treat more conditions remotely

Using the diagnostic tools in the TytoHome kit, patients can perform a comprehensive exam from home and share results with a clinician for a precise remote diagnosis. Built-in guidance technology ensures patients can easily capture accurate exam results so they can be confident that the remote diagnosis is the right diagnosis. The TytoHome kit includes attachments for examining the ears, throat, lungs, heart, skin, and capturing heart rate and temperature.
